

## TECHNICAL SPECS

- Diameter: 74 mm / 2,91"
- Height: 144 mm / 5,67"
- Weight: 48 g / 0,10 lbs

## MATERIALS

- Made of polymer-matrix composite material reinforced with painted fiberglass.

## FEATURES

**Prism** is the Elite water bottle holder. High fiber reinforced (FRP) material resisting.

Characterized by an innovative and elegant design,

**Prism** was made to ensure **maximum comfort in the management of bottle** for bicycles equipped with frames small sizes or with inclined tubes thanks to the **extraordinary lightness** and practical side insertion, particularly suitable for MTB and Gravel use.

### INNOVATIVE AND ERGONOMIC DESIGN

**Prism** provides a new elegant, innovative and ergonomic registered design that features a comfortable side-loading structured aimed at allowing riders to easily manage bottles when

space on the frame is limited.

This allows a water bottle to be extracted or placed in position even in frames that do not normally have sufficient space available, such as small, sloping or full frames.

For this reason, **Prism is particularly suitable for MTB use**, when bikers need to focus on the handlebar, and to concentrate on hand position without having to grope for the bottle while riding.

### RESISTANT AND LONG-LASTING MATERIAL

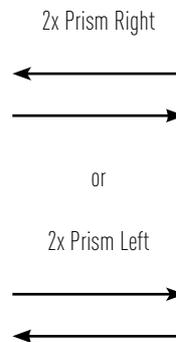

Lightness and mechanical resistance are the main features of the Elite bottlecages made in certified fibre-reinforced material (FRP), ensuring not only top performances and retention under any circumstance, but also a really long product life.

### INSERTION DIRECTION

**Prism Right** and **Prism Left** feature regular opening to the left or right when mounted on transversal oblique down tubes, but **they can change the insertion direction for the bottle** when mounted on seat-tube, the main tube of the bicycle.

For instance, if you want to have two bottlecage models on your bicycle, one opening to the left and one to the right, you'll have to mount two identical Prism models, either Left or Right, on

the down-tube and on the seat-tube.

Though if you want to maintain the same opening direction for both bottlecages you'll have to install two bottlecages with different insertion directions on the transverse tube and the seat tube.

### INCREASED GRIP FORCE ON THE BOTTLE

Simple and quick lateral insertion does not preclude a high-performance bottle retention. In fact, **Prism** was designed to meet MTB users' requirements with its structure
