

## TECHNICAL DATA

- Top tube protection length: 500 mm / 19,68"
- Total length: 720 mm / 28,34"
- Width: 115 mm / 4,53"
- Maximum elastic stretch: 450 mm / 17,71"
- Suitable for smartphones up to: 6.7"
- Handlebar section: for road frames
- Frame section: for all bike frames

## MATERIALS

- Polyester, PVC, Nylon PA, PP, Natural rubber, Polyurethane, POM

## FEATURES

**Protec Wings** is Elite's new accessory designed to protect the **frame of all bikes** and **road handlebars** from sweat during indoor training. Its main features are the **quick installation** on the frame and the **ultra-absorbent technical fabric**, which prevents sweat from reaching the most exposed parts of the bike, reducing the risk of **corrosion and wear over time**.

The **modular structure** consists of two sections: one for the top tube and one for the

handlebar, offering full coverage and maximum ease of attachment.

Installation is **simple and immediate** thanks to the intuitive design: **Protec Wings** is made of **two adjustable anchor points** that easily adapt to different **frame sizes, road handlebar widths, and top tube lengths**, making it compatible with most bikes on the market. The **two elastic straps at the base** ensure easy fastening, a stable position, and quick removal: protect your bike and start training right away.

The **hook-and-loop fastening system**, widely used in technical, sports, and medical gear, ensures **long-lasting performance** and withstands a high number of attachment cycles. **It connects exclusively to its matching surface**, preventing unwanted contact with other fabrics or materials.

The result is a reliable, easy-to-use, and highly durable fastening solution.

**Protec Wings** comes with a **smartphone pocket** featuring a transparent, touch-sensitive window, allowing you to use your smartphone during the workout without removing it.

### PROTECTS THE BIKE FROM SWEAT

The protection is made from **absorbent technical fabric** that prevents sweat from reaching the frame during indoor bike training, especially in the most exposed areas.

The **handlebar section** is made from special **microfiber**, designed to protect the bar tape and prevent moisture buildup, preserving its durability and quality even after intensive workouts.

The **handlebar section is compatible with road bikes**. By removing it, **Protec Wings fits all bikes available on the market**.

### A MODULAR DESIGN, READY TO USE

The **hook fastening system** ensures a **secure, stable, and precise hold**, thanks to a technology used in **technical, sports, and medical applications**, designed to **attach only to its specific counterpart**, avoiding accidental contact with other materials.

The **two adjustable anchor points** allow it to **adapt to different frame sizes and handlebar widths**, ensuring **maximum compatibility with most bikes**.

**Reinforced stitching** enhances its **resistance to wear**, while the **two elastic straps** at the base of the wing section allow for **quick, stable fastening** without interfering with pedaling, making setup **simple and immediate**.

#### TOUCH-SENSITIVE SMARTPHONE POCKET

The smartphone pocket includes a **high-resistance, touch-sensitive** transparent window that allows you to interact with your phone during workouts without removing it, while protecting it from sweat. Compatible with all smartphones up to **6.7"**.

#### EASY MAINTENANCE AND LONG LIFESPAN

It is recommended to **hand wash** the product to preserve the materials and shape. Do not iron or use a tumble dryer.
