- Bottom bracket support (x1)
- Shoulder strap (x1)

### AVAILABLE ON SHOPELITE-IT.COM:

- 15mm "Thru Axle" adapter (x2)
- 20mm "Thru Axle" adapter (x2)

## FEATURES

Protect your bike anywhere with **Borson**, Elite's bike bag created to let you quickly, easily and safely travel with your bike with no need to disassemble it or remove the saddle.

### ALL THE COMFORT OF MINIMAL DISASSEMBLY

**Compatible with most mtb, race and road bikes.** Borson is the practical Elite bag created to ensure quick and easy bike transportation without having to disassemble fundamental parts of the bike.

**Its convenient internal structure lets you maintain your bike in a vertical position without having to disassemble the handlebar and other components from the frame.**

You just need to disassemble pedals and wheels to place the bike inside the **Borson**, so you'll be able to always maintain the same saddle height.

### PRACTICAL AND EFFECTIVE DESIGN

**Created in a very resistant soft fabric,** Borson ensures unprecedented resistance thanks to its practical outer cladding made of two anti-tear side elastic panels.

**Two easy to use external handles and the integrated wheels,** designed to make the

bag easy to maneuver and transport anywhere, complete the design. **Borson features practical inner protective padding and a structure compatible both with thru-axle and with quick release systems.**

### SAFETY GUARANTEED ANYTIME

The solid and practical internal structure of the **Borson** lets you keep your bike in a vertical position: the best solution to protect it until it reaches its destination.

A practical internal velcro belt adds to the protection, as it's created to tie the bike to the provided rear axle in a mobile and flexible way, so the frame is very mobile in case there's any shock or stress to the bag.

### A TRULY COMPLETE ACCESSORIES KIT

Other than the internal fastening system, **the bag features protective covers for the handlebar, a practical derailleur cover, two pairs of rigid covers to protect wheel spokes from any shock and two bags for the wheels,** designed to be placed inside the **Borson** to protect the bike itself and the frame.

**Inside the bike bag there is an internal pocket designed to house the plastic protection for the rear derailleur.**

Please note: **Inserting foreign objects into the pocket may result in damage to the derailleur.**

The pocket is to be used exclusively to

accommodate the derailleur protection provided by Elite.

**Outside there is a practical pocket designed for all your documents and travel tickets, so you can access them in an instant.**

#### **YOUR IDEAL TRAVEL COMPANION**

Placing the bike inside the bag is quick and easy thanks to its practical opening with two hinges that allow users to easily fold and store the bag when it is not used.

**This easy opening also allows any airport or train station security personnel to inspect the bag without having to remove the bike.**

#### **IN SERVICE OF THE BEST WORLDTOUR TEAMS**

Very light, easy to use and practical to transport, the **Borson** has been created to ensure maximum protection to the bikes of our WorldTour champs during their many trips around the world.

It's no surprise then that our bag is the first choice of some of our best pro teams of the UCI circuit.
