

## DATI TECNICI

- Diameter: 74 mm / 2,91"
- Height: 147,5 mm / 5,81"
- Weight: 15 g / 0,033 lbs

## MATERIALS

- PA + Carbon fiber.

## FEATURES

**T-Race Carbon** is Elite's new bottle cage with **carbon fiber**, designed to make it **easier to insert and remove the bottle from all sides** during races. Made in **ultra-lightweight and highly resistant** carbon-reinforced material, it's great on the road but also when you're riding on your mountain bike or over gravel tracks as it ensures great retention and resistance over any terrain, even the roughest.

### MAX LIGHTNESS

The cage structure and the high resistance of the carbon fiber ensure **great resistance on just 15 g of weight**, so we can eliminate almost 50% of materials compared to traditional carbon-reinforced bottle cages. Ideal for every climbs and routes you're planning to explore.

### EASY INSERTION

**T-Race Carbon** is Elite's bottlecage made with Adriano Design. The design is shaped by the letter "T" as in Time Trial on the side of the bicycle's frame.

This cage is designed to ensure the **smoothest insertion and extraction** of the bottle with its **wide snap-fit opening**, which is particularly useful on bicycles with smaller or sloping frames.

### MAX BOTTLE RETENTION UNDER ANY CIRCUMSTANCE

The structure of the **T-Race Carbon** plays a crucial role in keeping the bottle body firmly in place, both on its high and low sections, so there's total retention even when facing bumps and shocks of particularly bumpy roads.

Perfect for **gravel tracks and mountain bikes**.

### GREAT RESISTANCE

Lightness and mechanical resistance are the main features of Elite bottlecages made in carbon fiber, which contributes in ensuring high performances, a **long life cycle** and the **greatest bottle retention over rough terrains**.

### FOR ALL BOTTLES

With its **74 mm diameter**, **T-Race Carbon** accommodates all commercially available standard-sized bottles.
